PROFESSIONAL EXPERIENCE

Customer Analytics Intern, Lands' End (Dodgeville, WI, USA)

May 2026 - Present

- Automated reporting of customer retention and demand metrics using **AWS Lambda, Athena, SES, CloudFormation & Power BI**, delivering scheduled insights to stakeholders and reducing manual workload by **25x** (2 hrs to 4-5 seconds).
- Empowered the Customer Insights Team to build/manage cloud infrastructure, scaling to support over **16 active IaaS resources**, by engineering an Infrastructure as Code (IaC) foundation from scratch using **Terraform** and **Git CI/CD**.
- Rebuilt **GitLab CI/CD** pipelines making **multithreaded parallel testing** to cut pipeline execution time by **34%**.

Data Engineering Intern, American Family Insurance (Madison, WI, USA)

May 2025 - August 2025

- Led **AWS-to-GCP** migration of data pipelines, redesigning ETL workflows with **Cloud Composer, BigQuery SQL**, and dynamic **Airflow DAGs**, and implementing incremental load methodology across 4 pipelines achieving **16x faster** processing, **11x cost reduction**, and **33.34% cost savings** per pipeline.
- Recognized in identifying a critical data inconsistency bug during pipeline POC where **GCP** batch data ingestion contained 65 extra entries compared to **AWS** real-time data within **10M+ records**, enabling production fixes.
- Piloted **Claude Code** (agentic AI) onboarding for the Data Engineering org, enabling secure, frozen-deployment setup on **Google Vertex AI** and accelerating cross-team adoption of AI-assisted development.

Data Science Intern, Bajaj Finserv (Bengaluru, India)

February 2024 - September 2024

- Deployed the end-to-end agentic workflow across 11 diverse document datasets, successfully parsing complex medical and identification entities with a low **1.2% false-positive rate**.
- Built a OCR pipeline (**PaddleOCR, Tesseract, Azure Vision, Redshift**) to classify and extract unstructured clinical handwriting, utilizing hyperparameter tuning to achieve **89% inference accuracy**.
- Engineered a streamlined NLP extraction system using **OpenAI APIs** for Named Entity Recognition, optimizing processing efficiency by replacing heavy agent architectures with targeted LLM API calls.

Software & Data Intern, Teamlease Digital Services (Bengaluru, India)

March 2023 - June 2023

- Architected a **Python Flask-based analytics platform** with **PostgreSQL**, building RESTful APIs to process complex JSON records via **Pandas and NumPy**, cutting manual data-handling time by **91%** for stakeholders.
- Developed 21 **Google Charts** dashboards visualizing workforce metrics, deploying the WSGI app via **NGROK** making the HR team access real-time, view-only insights without requesting custom reports, cutting turnaround by around **30%**.

ML Engineering Intern, Automatic Data Processing (ADP) (Hyderabad, India)

June 2022 - September 2022

- Engineered an **XGBoost** attrition prediction model achieving **93.8% accuracy**, utilizing **Pandas** to process JSON employee data and extracting key insights through 15+ feature visualizations, which helped to analyze employee lifespan.

TECHNICAL SKILLS

AI/ML Engineering: Python, TensorFlow/PyTorch, RAGs, LLM APIs, Regression, t/Chi-Square, ANN, CNN, Transformers

Data Engineering: MySQL, PostgreSQL, DynamoDB, Redshift, Cassandra, NoSQL, Airflow, Spark, Kafka, Hadoop, Hive

Cloud & Analytics: AWS (EC2, S3, Athena, Lambda, Glue, SageMaker, Bedrock, Neptune, SQS, CloudFormation), GCP (Pub/Sub, BigQuery, Composer, GCS, Neo4j, Dataflow), Azure, Git, Terraform, Docker, Beam, MapReduce

SELECTED PROJECT

Hybrid NN for EEG Brain Anomaly Classification | github.com/Advaith789/brain-waves-classification

- Engineered a pipeline with **Fourier & wavelet transforms** to extract salient features from EEG & spectrogram data.
- Architected a novel hybrid deep learning model, ensembling predictions from **CNNs** and tree-based models using a logistic regression learner, achieving a **94% accuracy** in the multiclass classification of harmful brain activity from EEG signals.

GrabIt: Cloud Data Migration & Analytics | github.com/Advaith789/grabit

- Pivoted complex entity extraction models to a scalable, count-based visualization framework utilizing **ReactJS** and **Node.js**, rapidly delivering critical **automation dashboards** processing 500,000+ records.
- Developed highly available **RESTful APIs** to integrate datasets into downstream systems, operating under Agile SDLC methodology to accelerate reporting turnaround by 35% while maintaining data lineage.

EDUCATION

M.S. Data Science | University of Wisconsin Madison (3.8/4.0)

WI, USA | Sep 2024 - May 2026

B.Tech. Computer Science & Eng. | Vellore Institute of Technology (8.89/10)

Vellore, India | Sep 2020 - Jun 2024

EXTRACURRICULAR, CERTIFICATIONS & PUBLICATIONS

Certifications: AWS Certificate for Data Analytics Using Big Data & Deep Learning at NUS (Singapore)

Publications: "Unveiling Disparities in Polycystic Ovary Syndrome Detection..." (IEEE NEleX. [Link](#))

Research: NUS (Jun'23) | Seismic ANN+Random Forest (91% acc.) on AWS SageMaker & DynamoDB, optimizing by 25%.

Leadership: Toastmasters International – President of Trueno VIT | Best Volunteer (Mahitha NGO)
